Claims 8-9, 11-16, and 21-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cook et al in view of Erickson et al.

See Figure 6 of Cooke et al. Cook et al use a separate member 87 which appears to center the spring. However, adjusting the spring bias in solenoid valves is old and well known. Erickson et al show an adjustment member 50 with an integral centering part 58. It would have been obvious for one of ordinary skill in the art at the time the invention was made to have made the part 87 of Cook et al as an integral part of the adjustment member 88 in view of the readily apparent equivalence of the two structures. The use of an O-ring seal as shown in Figure 3 is an obvious expedient to improve the seal of the valve of Figure 6.

It is noted that some of the dependent claims recite both 7 and 21, an apparent oversight. Correction is required.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
